PHISHING AWARENESS TRAINING

Prepared By: KUMARI SHIWANI
CodeAlpha Cyber Security Internship

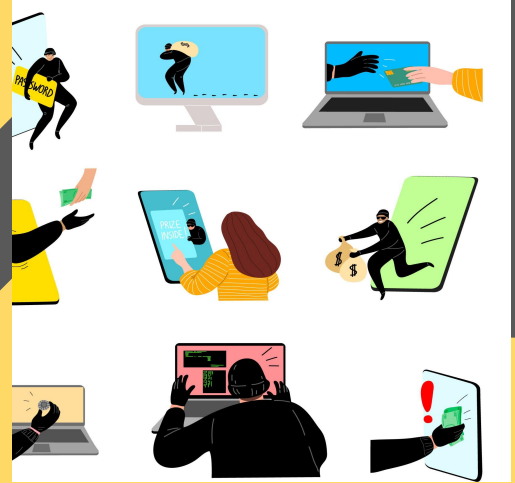

What is Phishing?

Phishing is a cyber attack in which attackers try to trick users into revealing sensitive information.

Attackers often use fake emails, messages, or websites to steal:

- Passwords
- Banking Details
- OTPs
- Personal Information

Phishing is one of the most common cyber threats today.

Types of Phishing

1. Email Phishing
Fake emails used to steal information.
2. Smishing
Phishing through SMS messages.
3. Vishing
Phishing through phone calls.
4. Spear Phishing
Targeted phishing attacks on specific individuals.

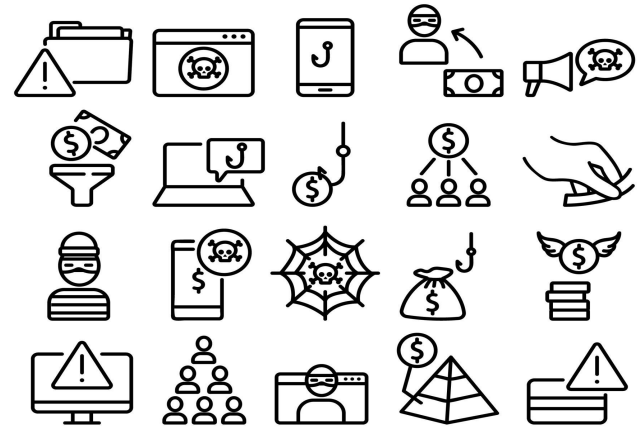

Phishing Attack

EDITABLE STROKE

How to Recognize Phishing Emails

- Unknown sender address
- Spelling and grammar mistakes
- Urgent requests
- Suspicious links
- Unexpected attachments

SCAM

Fake Websites

fake websites look similar to real websites.

Always check:

- Website URL
- HTTPS security lock
- Correct domain name

Example:

Real: amazon.com

Fake: amaz0n-login.com
